High Railway Station Turnstile Tripod Ticket Checking RFID ID Card Reader Security Access Controly

Discriptions of Ticket Check Tripod Turnstile:

SEWO high-end series tripod turnstile is a powerful management system for people passing through fast. It is an ideal upgrade equipment for intelligent access control, and solve the obstacle problem in traditional access control, especially for problem from people when carrying luggage or disable person. It's mainly used in super markets, shipping malls. The case of the products are made of imported stainless steel press forming with elegant appearance, rust-proof, durable. This pedestrian gate can ensure people pass through the access orderly, and forbid people illegally in and out. In case of emergency, it open fast and let people evacuate.

Key Features of Scenic Spot Turnstile Gate:

Mechanical drive unit with solenoid locking mechanism eliminate the use of expensive electric motor and reduce maintenance cost.

If arm rotated more than half, it will auto-rotate to the next idle position. If arm rotated less than half, it will auto-rotate back to the current idle position.

Built in adjustable tensioner to control rotation force to minimize over rotation. Arm just need to be pushed lightly to rotate therefore even elderly or children are able to use the turnstile.

Turnstile can be configured to be bi-directional or uni-directional. Housing is locked with special key to avoid tampering.

When power off, the arm will be dropped down (optional set free passage when power off) to the request of fire protection. When power on, the arm can lift by hand.

Emergency configuration: the tripod will drop automatically by power off to provide a clear walkway for escape in the event of an emergency

Control panel with count and LED digital function. Traffic-light: A Red Cross symbol will illuminate to indicate the unit is not available for pass, and a green arrow indicate the direction of allowable passing.

It can be used for intelligent control and management of the passage after equipped with different access control system.

A valid lock action can allow one passage at one time. It will lock automatically if passage through turnstile is not completed within pre-set time, the set time(from 2-60 seconds, by default, it is 10 seconds) can be set up with the built-in small keyboard or software.

Self-recovery function: the machine will recovery automatically with invalid counting if passage is not completed within pre-set time (5 seconds default, adjustable by software).
